User Manual

Dual Laser InfraRed (IR) Thermometer

MODEL 42570

Introduction

Congratulations on your purchase of the Model 42570 IR Thermometer. This Infrared thermometer measures and displays non-contact temperature readings up to 3992 F/2200 C (certified to 2000 F/1100 C). At 50°, built-in dual lasers converge to 1" target spot to insure accurate targeting and temperature measurement. Advanced features include a USB PC interface and software, 100ms response time, Max/Min/Ave/Diff displays adjustable emissivity and High/Low alarms. Proper use and care of this meter will provide years of reliable service.

Warranty

EXTECH INSTRUMENTS CORPORATION (A FLIR COMPANY) warrants this instrument to be free of defects in parts and workmanship for three years from date of shipment (a six month limited warranty applies on sensors and cables). If it should become necessary to return the instrument for service during or beyond the warranty period, contact the Customer Service Department at (781) 890-7440 ext. 210 for authorization or visit our website at www.extech.com (click on 'Contact Extech' and go to 'Service Department' to request an RA number). A Return Authorization (RA) number must be issued before any product is returned to Extech. The sender is responsible for shipping charges, freight, insurance and proper packaging to prevent damage in transit. This warranty does not apply to defects resulting from action of the user such as misuse, improper wiring, operation outside of specification, improper maintenance or repair, or unauthorized modification. Extech specifically disclaims any implied warranties or merchantability or fitness for a specific purpose and will not be liable for any direct, indirect, incidental or consequential damages. Extech's total liability is limited to repair or replacement of the product. The warranty set forth above is inclusive and no other warranty, whether written or oral, is expressed or implied.

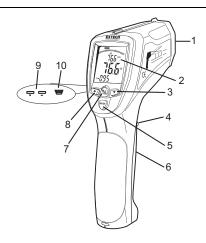

Safety

- Use extreme caution when the laser pointer is on
- Do not point the beam toward anyone's eye or allow the beam to strike the eye from a reflective surface
- Do not use the laser near explosive gases or in other potentially explosive areas

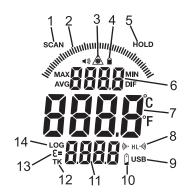

Meter Description

- 1. IR sensor and Laser Pointers
- 2. LCD Display
- 3. Down Button
- 4. Measurement Trigger
- 5. Mode Button
- 6. Battery compartment
- 7. Backlight/Laser Button
- 8. Up Button
- 9. Type K thermocouple input (side)
- 10. USB port (side)

DISPLAY

- 1. SCAN, measurement in progress
- 2. Bargraph
- 3. Laser pointer active
- 4. Power locked ON
- 5. HOLD, last measurement locked in display
- 6. Max/Min temperature display or memory location display
- 7. Main temperature display
- 8. High/ Low limit alarm
- 9. USB connection
- 10. Battery status
- 11. Emissivity or Type K or Stored value display
- 12. Thermocouple probe installed
- 13. Emissivity setting
- 14. Logged memory

3

Operating Instructions

IR Temperature Measurements

- 1. Hold the meter by its handle and point it toward the surface to be measured.
- Pull and hold the trigger to turn the meter on and begin testing. "SCAN" and the temperature reading will appear on the large display. The upper and lower sub-displays will indicate values/settings previously used.
- Release the Trigger and the reading will hold for approximately 7 seconds ("HOLD" will appear on the LCD) after which the meter will automatically shut off. The only exception to this is if the LOCK mode is set to ON.

The MODE button options

With the trigger pulled (SCAN displayed), Press the MODE button to view and scroll through:

MAX : Maximum value measured
MIN: Minimum value measured

DIF: Difference between the Max and Min values

AVG: Average of the measured values

LOG: A memory location is displayed in the small upper display and the value in that

location is displayed in the small lower display. Press the ▲ or ▼ buttons to

scroll through the locations.

TK: With a Type K thermocouple probe connected to the meter, the probe

temperature is displayed in the small lower display.

With the trigger released (HOLD displayed), Press the MODE button to scroll through and access the following. The selected item is indicated by a blinking icon.

Recorded data: (Press the ▲ or ▼ button to scroll through and view)

MAX

MIN

DIF

DIF AVG LOG

ξ = Emissivity (blinking **ξ**=). Press the **Δ** or **▼** button to set the value.

Lock mode. Press the ▲ or ▼ buttons to select ON or OFF.

((I* HL High alarm ON or OFF (blinking H). Press the ▲ or ▼ button to select.

((I HL High alarm value adjustment (blinking **H** and (I). Press the ▲ or ▼ button to set the value.

HL•))) Low alarm ON or OFF (blinking L). Press the ▲ or ▼ button to select.

HL•/)) Low alarm value adjustment (blinking L and *))). Press the ▲ or ▼ button to set the value.

°C or °F Temperature units. Press the ▲ or ▼ button to select.

Dual Laser Pointer and Backlight Button

The dual laser pointers are designed to cross at a distance of 50" (76cm). The spot size at this distance is a 1" diameter and this is the recommended distance to target for most measurements. To turn the lasers on/off:

- 1. Press and Hold the Trigger
- The status of the functions will be stored in memory and will remain as the default "turn-on" condition until changed.

High and Low Alarm Feature

When either programmed alarm (high or low) point is reached the meter will alert the user via an audible beep and a blinking LCD display icon. The alarm limit is set and the feature is enabled/disabled using the MODE button. The setting is stored and memory and will remain as the "turn-on" condition until changed.

Temperature Units

The temperature units can be set to °F or °C. The selection is made using the MODE button.

Lock feature

The LOCK feature disables the Auto Power Off feature for the period of use when selected. The feature is useful for long term temperature monitoring and hands free use. The meter will revert to auto power off if the trigger is pressed during a locked scan. The selection is made using the MODE button.

Over-range Indication

If the temperature measurement exceeds the specified temperature range, the thermometer will display dashes in place of a temperature reading.

USB Function

The supplied software and cable are used to transmitt the IR and Type K measurement data to a PC via USB.

To Turn-on or Shut-off the USB function:

- With MAX, MIN, DIF, or AVG displayed, press the LIGHT/LASER button until "USB" sign appears in the right lower corner of the LCD. USB is active.
- Press the LIGHT/LASER button again until "USB" disappears. The USB function is off

Refer to the help file in the software for operational details.

Battery Replacement

When the low battery symbol appears on the display, replace the meter's battery (9V). The battery compartment is located behind the panel that surrounds the meter's trigger. Open the compartment by pressing the release button (1) and then pulling the panel (2) down from the trigger area. Replace the 9V battery and close the battery compartment cover.

Data Logger

Storing Data: The thermometer is capable of storing up to 100 data points.

Infrared: To store data from an infrared reading,

- 1. Pull and Hold the trigger
- Press the MODE button until LOG appears in the lower left corner of the display; a log location number will be displayed. If no temperature has been recorded in the displayed LOG location, 4 dashes will appear in the lower right corner.
- 3. Aim the unit at the target area you want to record, and press the laser/backlight button. The recorded temperature will appear in the lower right corner.
- 4. To select another log location, press the up and down keys.

Recalling Data: To recall stored data after the unit shuts off,

- Press the MODE button until LOG appears in the lower left corner. A LOG location number will be shown below LOG, and the stored temperature for that location will be display.
- 2. To move to another LOG location, press the UP and Down keys.

Log Clear Function: To clear the memory,

The "Log clear" function allows you to quickly clear all logged data points. This function can only be used when the unit is in the LOG mode.

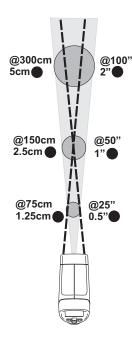

- While in LOG mode, press the trigger, and then press the "down" arrow button until LOG location "0" is displayed. Note: This can only be done when the trigger is pulled. LOG location "0" cannot be accessed, by using the "up" arrow button.
- When LOG location "0" shows in the display, press and release the laser/backlight button, then press and release the up arrow key. A tone will sound, and the LOG location will automatically change to "1", signifying that all data locations have been cleared.

IR Measurement Notes

- 1. The object under test should be larger than the spot (target) size calculated by the field of view diagram (printed on the side of the meter and in this guide).
- 2. Before measuring, be sure to clean surfaces that are covered with frost, oil, grime, etc.
- If an object's surface is highly reflective, apply masking tape or flat black paint to the surface before measuring. Allow time for the paint or tape to adjust to the temperature of the surface it is covering.
- 4. Measurements through transparent surfaces such as glass will not be accurate.
- Steam, dust, smoke, etc. can obscure measurements.
- 6. The meter automatically compensates for deviations in ambient temperature. However, it can take up to 30 minutes for the meter to adjust to extremely wide changes.
- 7. To find a hot spot, aim the meter outside the area of interest then scan across (in an up and down or side to side motion) until the hot spot is located.

Field of View

The meter's field of view is 50:1. For example, if the meter is 50 inches from the target (spot), the diameter of the target must be greater than 1 inch. Other distances are shown in the field of view diagram. Measurements should normally be made as close as possible to the 1" spot distance. The meter can measure from longer distances, but the measurement may be affected by external sources of light. In addition, the spot size may be so large that it encompasses surface areas not intended to be measured.

42570 V1.0 8/09

Range	-58 to 3992°F (-50 to 2200°C)(typical spec only >1832°F/1000°C)	
Resolution	0.1° < 1000°, 1° ≥ 1000°	
Accuracy	-58°F to -10°F(-50°C to -23°C) -10°F to 28°F(-23°C to -2°C) 28°F to 200°F (-2°C to 94°C) 200°F to 400°F (94°C to 204°C) 400°F to 800°F (204°C to 426°C) 800°F to 1832°F (426°C to 1000°C) 1832 to 3992°F (1000°C to 2200°C) Note: Accuracy is specified for the fol 73 to 77°F (23 to 25°C)	±14°F/7°C (Typical) ±8°F/4°C ±4.5°F/2.5°C ±(1.0%rdg + 2°F/1°C) ±(1.5%rdg + 2°F/1°C) ±(3%rdg +2°F/1°C) ±(5%rdg +4°F/2°C)(typical only) lowing ambient temperature range:
Emissivity	0.10 to 1.00 adjustable	
Field of View	D/S = Approx. 50:1 ratio (D = distance; S = spot or target)	
Laser pointer	Dual, Class 2 laser < 1mW power; Wavelength is 630 to 670nm	
IR Spectral response	8 to 14 μm (wavelength)	
Repeatability	± 0.5% of reading or ± 1.8°F (1°C) whichever is greater	

General Specifications

Display Backlit LCD display with function indicators

Response time 100ms
Over range indication "------"

Operating Temperature 32°F to 122°F (0°C to 50°C)

Operating Humidity 10% to 90%RH operating, <80%RH storage.

Storage Temperature 14 to 140°F (-10 to 60°C)

Power Supply 9V battery

Automatic Power Off 7 seconds, with LOCK to disable

Weight 11.3 oz. / 320g

Dimensions 8 x 6.1 x 2" (204 x 155 x 52mm)

Calibration and Repair Services

Extech offers repair and calibration services for the products we sell. Extech also provides NIST certification for most products. Call the Customer Service Department for information on calibration services available for this product. Extech recommends that annual calibrations be performed to verify meter performance and accuracy.
